### EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Ronald Kananen on 12/3/04.

The application has been amended as follows:

**Cancel Claim 17.**

### *Allowable Subject Matter*

Claims 9-16 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art of record fails to teach or render obvious a surface-processing method for a multi-layer printed wiring board comprising the steps of: etching the surface of a conductor pattern formed on at least one outer layer of a printed wiring board; rinsing the surface of the printed wiring board the conductor pattern of which has been etched by said etching step; removing air bubbles affixed to the surface of the printed wiring board by immersing the printed wiring board rinsed by said first rinsing step in a water-soluble pre-flux liquid in a processing vessel; forming a pre-flux film on said conductor pattern on said outer layer of said printed wiring board in the pre-flux liquid, freed of air bubbles, using an in-liquid spray provided in said pre-flux liquid in said processing vessel, removing the pre-flux liquid from the surface of said printed wiring board carrying said pre-flux film and transferred from said processing vessel, and rinsing the surface of said printed wiring board from the surface of which said pre-flux liquid has been removed by said liquid removing step.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Art Unit: 1763

**Conclusion**

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

U.S. Patent 4,429,457 to Noguchi et al. teaches a method of forming a preflux on a patterned circuit board substrate. U.S. Patent 5,127,571 to Gutierrez et al. teaches a water-soluble preflux for a circuit board.
